ARA Safety- The FIT-5 is a handheld device that knocks down interior fire in a few seconds. When deployed, it interrupts fire at the molecular level, rapidly reducing flames and temperature. The aerosol powder is non-toxic, non-corrosive, non-conductive, and does not affect oxygen levels. It is effective on Class A, B, and C fires in confined spaces.

Booth # 136

ARA Safety's FIT-5 (Fire Interruption Technology) is a compact, portable handheld device that knocks down interior fire in a few seconds. The FIT-5 contains an aerosol forming agent that, when activated, interrupts the fire at the molecular level, rapidly reducing flames and temperature. The aerosol powder is non-toxic, non-corrosive, non-conductive, and does not affect oxygen levels. The FIT-5 is effective on Class A, B, and C fires in confined spaces and is safe for use with electronic and other equipment. The FIT-5 will knock down a fire in a 2100 cu. ft. room and will slow the spread of fire in larger spaces. Rapid deployment of the FIT-5 makes interior attack safer and quicker and makes overhaul easier.

Derma-Gard- We developed a vastly superior line of fire resistant station/work uniform components. Fire Resistant garments for the fire service is not a new concept, what is new is that we have been able to perfect our process to provide state of the art performance with our special Derma-Gard Safety Printing Technique (NO Plastic Lettering). ALL USA MADE!

Booth # 2610

Derma-Gard manufactures textile products that are fire resistant. Our products are manufactured in the USA at our plant in Milledgeville, Georgia. Our company mission is to use our experience and expertise to identify products that improve the market need. Our initial focus is in providing superior product to the Fire and Emergency Services personnel in the United States. We have developed a vastly superior line of station/work uniform components. These are the standard 100% cotton T-shirt in both short sleeve and long sleeve versions. We have also developed an 80% cotton/20% polyester long sleeve fleece sweatshirt and a 100% Cotton Polo Shirt. All of these products are available in the standard fire service Navy Blue color (other colors are available on request). Our shirts are comfortable and look and feel like the standard shirts that firefighters wear everyday but with the big difference that ours are Fire Resistant. Fire Resistant garments for the fire service is not a new concept, what is new is that we have been able to

perfect our process to provide state of the art performance with our special Derma-Gard Safety Printing Technique (NO Plastic Lettering) and do this at reasonable prices. We are American manufacturing producing a product to better protect American Firefighters.

New Product: "The Derma-Gard Professional Firefighter's T-Shirt"

Our product is a 100% Cotton Fire Resistant T-Shirt with the Derma-Gard Safety Printing Technique. This printing process renders this shirt 100% fire resistant with complete natural feel and breathability, which makes this shirt not only completely fire resistant, but also superior to any regular t-shirt that is screen printed with plastisol. We call this shirt, "The Professional Firefighters T-Shirt" for very good reasons. There are many T-Shirts being used by firefighters for their normal duty/station work wear shirts. However, when you examine these shirts you will find that they are all just basic t-shirts that have been screen printed with various department identification. These shirts are no different than the white t-shirt that the average man wears to any kind of non hazardous work environment. That just isn't good enough for firefighters who wear their t-shirt into very dangerous work environments. Our shirt is made to work in conjunction with the other personal protective equipment that

firefighters employ to protect themselves. Our shirt is 100% fire resistant, it will add an additional layer of protection to the firefighter in the main critical core area of his body. A regular cotton t-shirt may be OK for an accountant to wear to work, but it's not OK for a firefighter, it's just not good enough. The clear choice for the professional is; "The Derma-Gard Professional Firefighters T-Shirt".

DEUS Rescue delivers innovative vertical rescue solutions, including the DEUS 3100 for fire professionals. For self rescue or multiple victim rescue, the DEUS 3100 operates easily, either hands free or under manual control. Its four independent brakes and automatic speed-limiting technology work together to guard against free fall.

Booth # 2304

DEUS Rescue delivers innovative vertical rescue solutions, including the DEUS 3100 for fire professionals. The DEUS 3100 is an engineering marvel of safety, simplicity and reliability for emergency self rescue and multiple victim rescue. From its compact, lightweight design to its heavy duty construction, the DEUS 3100 is made for fire and rescue. It operates easily, either hands-free or under manual control, with an extra large control knob. Its four

independent brakes and automatic speed-limiting technology work together to guard against free fall. Trust DEUS Rescue when lives are on the line.

New Product: DEUS 3100 Individual Vertical Rescue for Fire Professionals

The DEUS 3100 is a highly engineered, German made bailout system for fire professionals. The DEUS 3100 operates hands free in both "stop" and "go" modes, or under manual control, with an extra large control knob so it is easy to use, even with heavy gloves. The unique design and extensive features of the DEUS 3100 provide for quick, safe and easy self rescue and multiple victim rescues. Four independent brakes work together with automatic speed-limiting technology to protect against free fall. A disk brake, a manual friction brake, a centrifugal brake and a hands free "figure 8" limit descent speed to approximately 3 meters per second, depending on load. The system is lightweight (0.9 kg plus rope), fits in a gear pocket, and is constructed of aluminum, stainless steel, brass and titanium. It is firefighter tested and certified to meet NFPA standards. DEUS Rescue certifies the DEUS 3100 for use only with DEUS 7.5 mm ropes made by Sterling Rope, a leader in rescue and safety ropes. Grace Industries, Inc. is a leading manufacturer of Personal Alert Safety Systems (PASS), One and Two-way Signaling PASS and Accountability Systems for Firefighters and Lone Workers, and Correctional, Courthouse, Industrial, and General Safety/Security uses, distributing throughout the United States and worldwide to more than 30 countries.

Booth # 242

New Product: TAC 3

TAC 3, in combination with IN-COMMAND, provides Total Firefighter Accountability. The TAC 3 combines radio signal transmitting and receiving, creating a highly advanced two-way signaling safety system. TAC 3 receives Evacuation signals transmitted from IN-COMMAND and alerts the Firefighter to EVACUATE. A MAYDAY button on the front of the unit activates a loud audible alarm and transmits a distress radio message back to IN-COMMAND showing the Firefighter(s) in distress by name. These high performance radio telemetry signals use encrypted data for reliable and secure signaling. The TAC 3 is compatible with integrated PASS systems, and can operate with all existing Grace Industries? Telemetry Systems.

Provides an improved level of safety for Firefighters with the following outstanding features...

- Emergency Firefighter Evacuation
- Telemetry Accountability Protection With or Without SCBA
- MAYDAY Signaling: Immediate Notification of MAYDAY to IN-COMMAND
- Certification: Intrinsically Safe to UL913
- Two Models Available: Auto On or Manual Activation
- High Performance Two-Way Radio Signaling: No FCC License Required
- Automatic Acknowledgment: IN-COMMAND Verifies that Each Firefighter has

Received the Evacuate Message, as well as PAR and ROLL CALL signals

- Firefighter Acknowledgment: By Pressing Both Side Buttons, A Manual Acknowledgment is Transmitted Confirming Receipt Of Evacuation Command or PAR and ROLL CALL Signals
- Proprietary "Smart-Signal" Technology: Significantly Improves Radio Signal Effectiveness
- TAC 3 Is Not a PASS Device, But Performs as an Automated Accountability and Two-Way Emergency Signaling System

Hale / Class 1 - Truck Mounted pumps including the best selling Qmax Muscle Pumps. Portable pumps, CAFSPRO Compressed Air Foam Systems, FoamLogix Foam Proportioning systems, Class 1 electronics and gauges.

Booth # 617

New Product: TBP Twin Booster Pump

Hale Products has released the first 750 GPM rated two stage series/parallel PTO driven fire pump in the industry. This unique pump meets the demands for higher pump performance for structural fires. The TPB can also generate the high pressures necessary to operate progressive hose lays and the capability of providing low speed pump and roll. The TBP Twin Booster Pump exceeds NFPA 1901 and 1906, ISO 8 and NWCG3. Ideal for wildland firefighting, the TBP can be used in any rural/urban interface applications.

Knox Company- Knox Rapid Entry System is a proven system of high security products that reduces response time, property damage and the liability for lost keys. Additionally, Narcotic access can be controlled and audited with the MedVault. More than 10,000 fire departments and emergency agencies have depended on Knox since 1975.

Booth # 628

New Product: MedVault Narcotics Drug Locker

Emergency Medical Narcotic access can now be controlled and its access audited with the new Knox MedVault. With this drug locker, controlled substances are secured until authorized personnel access them with their unique PIN code. An audit trail showing the time, date and PIN code is recorded each time the vault is opened. With the patent pending Virtual Interlock Validator, the door of the unit must be closed and locked for the audit trail to record that box is secured. The MedVault unit stores 1 to 5,000 unique PIN codes and 25,000 events. The audit trail is collected by connecting the MedVault unit to a PC via a USB port. This special alloy constructed vault is ideally suited for mounting in a rescue vehicle.

Life Star Rescue, Inc. - Remanufactured/remounted ambulances; custom design and fabrication of rescue trucks; specialized ambulance service center; and online emergency vehicle parts store. See available remanufactured ambulances, rescue units, and pre-owned ambulances online at LifeStarRescue.com. Growing inventory of parts for ambulance and rescue

Booth # 3413

Remounts at Life Star Rescue are unmatched in quality and design. Life Star Rescue offers repair, remanufacturing and refurbishment from the 50,000 square foot manufacturing facility in Van Wert, Ohio. Life Star Rescue serves customers from New Jersey to California and everywhere in between.

Life Star Rescue's ambulances go through a complete metamorphosis during the remanufacturing process. After a thorough inspection, the vehicle is deconstructed. Wiring, flooring and bumpers are removed so that the rebuilding process can start from scratch. Before fitting the module with the new chassis, the module is improved with cabinets, wiring and lights. The module is then lifted onto the chassis and carefully wired. Life Star Rescue's unique approach and commitment to remounting ensure that all remanufactured ambulances uphold the highest industry standard. Many squads find Life Star Rescue's remanufactured ambulances a cost saving alternative to buying new, and in most cases remanufacturing saves up to 30%. Departments realize even more savings when they adopt remanufacturing into the lifecycle of every unit.

From light to medium and even heavy duty rescue trucks, Life Star Rescue custom designs and fabricates rescue trucks to fill each squad's unique needs. Life Star Rescue offers ten foot and twelve foot light duty rescues available in both low and high body styles. Medium duty rescue configurations come in walk-in or non-walk-in designs while heavy duty trucks meet the most extreme demands of any department. Life Star Rescue has been building rescue trucks since its inception in 1998.

Life Star Rescue continues to serve the customer by offering maintenance programs and a comprehensive online parts store. Life Star Rescue's service department is dedicated to excellent vehicle repair and outstanding customer service. They are experienced in both routine maintenance and major collision repair. Life Star Rescue's online parts store offers a searchable inventory of items that are in stock, special order and hard to find. If the item is not listed on the website, be sure to call Life Star Rescue, and we will locate those hard to find parts for you.

Life Star Rescue Inc. builds emergency vehicles for squads nationwide and specializes in remanufacturing ambulances and custom design and fabrication of rescue vehicles. Life Star Rescue, Inc's online store offers parts for emergency vehicles while the service department specializes in emergency vehicle repair. Founded in 1998, Life Star Rescue has grown to employ 42 people and produces 60 vehicles annually. Life Star Rescue guarantees quality assurance; every vehicle follows current industry standards. SafeScene- SafeScene is a solution provider with extensive experience in the wireless, RFID and application development fields. SafeScene's namesake product is the world's first fully automatic accountability system, delivering instant and constant accountability and the highest levels of safety, response and resource management for first responders.

Booth # 949

SafeScene is the developers of the world's first completely automatic accountability system for first responders. With SafeScene, arrival and presence of first responders and apparatus is detected automatically and immediately upon arriving on-scene, delivering the highest levels of safety, response and resource management, with features that include scene management, PAR timers and automatically-generated reports. SafeScene allows first responder organization a simple way to:

- Identify all personnel automatically as they arrive on-scene; no manual action required
- Eliminate manual and mechanical accountability methods
- Detect late-arriving personnel through continuous detection
- Eliminate problems and delays caused by lost, misplaced or forgotten tags or ID cards
- Efficiently manage first responder activities and monitor safety
- Speed resource assignment with simple actions
- Improve safety with automatic visual and audible PAR reminders
- Assist with NIMS and NFPA compliance
- Improve response and incident review with comprehensive, time-stamped report logs of all on-scene activities
- Seamlessly interface with third-party incident management systems
- Achieve superior, simplified multijurisdictional performance
-

Sophisticated Accountability - Simple and Reliable

Operations SafeScene utilizes RFID technology to persistently monitor the incident scene for the arrival and presence of first responders and apparatus with no human action or intervention required. SafeScene is easy to use and immediately improves accountability, incident response, scene management and personnel safety. The SafeScene application, loaded on a command laptop or notebook computer, is continuously updated with the identity of on-scene personnel and apparatus and allows the incident commander to assign personnel to crews or sectors, manage resources and monitor safety through PAR timers, among other incident management tasks. Comprehensive Reports For incident review and documentation purposes, SafeScene automatically records the arrival of personnel and all on-scene activities monitored by SafeScene and automatically generates a comprehensive variety of time-stamped reports that can be used for incident review, operational improvement and regulatory compliance review. Multijurisdictional Excellence SafeScene provides multijurisdictional capabilities with superior ease of use and reduced complexity. With SafeScene, the identities of first responders from multiple jurisdictions are recognized immediately upon arrival at the scene. User-Friendly and Customizable A password-protected administrative interface

allows departmental administrators to configure the SafeScene application to customize appearance and function for crews/sectors, appearance, PAR and other timers, as well as a number of other parameters. Interface to Third Party Incident Management Systems When interfaced to third-party incident command management systems, SafeScene can provide automatic detection and logging of on-scene first responders and apparatus within the other incident command system. Scalable From small volunteer fire departments to large multijurisdictional operations, and for incident scenes of all sizes, SafeScene can be easily customized to meet any agency's requirements and provide truly automatic accountability.

New Product: SafeScene

SafeScene is the world's first fully automatic accountability system, delivering instant and personnel accountability and the highest levels of safety, response and resource

management for first responders. SafeScene persistently monitors the incident scene for presence of personnel and apparatus, provides incident commanders the ability to manage resources, includes PAR and other timers to ensure safety and automatically generates a broad variety of reports for incident review and regulatory compliance.
